"Mining exploration

investment in the Latin American and Caribbean region has increased 130 percent in the last five years, a figure which increases to 500 percent, if Chile is excluded." Governments have revamped mining legislation to enable private investment while

Where To Download 1988

becoming more sensitive to environmental factors. In light of this legislation, this report examines the environmental effects of artisanal, small, and medium mines in three Latin American Countries: Bolivia, Chile, and Peru. Four of the most

important elements
to be considered
are: □ The age of
the mine □

Management of
tailings □ The
heterogeneity of
the artisanal and
small mine sectors

□ The increasing
need to take
cultural
considerations into
account in the

decision making process. The paper contains results of the studies on the various mining sectors, strategy and policy recommendations, and country study summaries.
