Grounding and bonding as electrical installation protocols overlap to a certain extent, but they are not identical. In bonding, the emphasis is on creating low-impedance electrical connections between two or more conductive (metallic) bodies that are not normally current-carrying. These bonded objects are usually but not always grounded.

What you have to remember in this situation is that you're dealing with two separate issues. With respect to the grounding electrode, as specified in 250.30(A)(7), one electrode is adequate. With respect to bonding, you must do whatever section 250.104(D) instructs you to do — regardless of what you did with the electrodes as per 250.30(A)(7).

Beyond the 2005 NEC Changes: Art. 250—Grounding and Bonding

In Part 1: Grounding Versus Bonding, you will recall that we made a clear distinction between grounding, which is to provide a conductive path in the form of an equipment grounding conductor (EGC) for current to flow (to trip a circuit breaker or fuse) in the event of a ground fault condition. And bonding, which is to create continuity between ...

Additionally, under Chapter 7 Part 4.1.5, NFPA 77 notes that either insulated or uninsulated wires can be used for bonding and grounding but uninsulated wires are recommended because they allow for easier detection of defects. Insulated wires are those with a protective rubber or vinyl coating that completely encompasses the wire.

The definitive guide to distribution and transmission line technology—fully updated Completely revised to reflect the 2012 National Electrical Safety Code (NESC), The Lineman's and Cableman's Handbook, 12th Edition, provides in-depth information on overhead and underground distribution and transmission lines. The latest OSHA, ANSI, and ASTM standards are emphasized throughout. This authoritative resource presents basic principles, equipment, standards, and safety regulations, allowing electrical workers to avoid costly errors, diagnose and repair power failures, and ensure optimum safety. A wealth of illustrations and photographs make it easy to understand the material, and self-test questions and exercises help reinforce key concepts. Comprehensive coverage includes: Electrical principles and systems * Substations * Circuits * Construction * Wood-pole, aluminum, concrete, fiberglass, and steel structures * Distribution automation * Emergency system restoration * Unloading, hauling, erecting, setting, and guying poles * Insulators, crossarms, and conductor supports * Line conductors * Distribution transformers * Lightning and surge protection * Fuses * Switches, sectionalizers, and reclosers * Voltage regulators * Transmission tower erection * Stringing, sagging, and joining line conductors * Live-line maintenance * Grounding * Street lighting * Underground distribution * Vegetation management * Distribution transformer installation * Electrical drawing symbols * Single-line and schematic diagrams * Voltage regulation * Units of measurement, electrical definitions, electrical formulas, and calculations * Maintenance of transmission and distribution lines * Rope, knots, splices, and gear * Climbing and wood poles * Protective equipment * OSHA 1910.269 * Resuscitation * Pole-top and bucket rescue

This book outlines the protection standards typically contained in international investment agreements as they are actually applied and interpreted by investment tribunals. It thus provides a basis for analysis, criticism, and stocktaking of the existing system of investment arbitration. It covers all main protection standards, such as expropriation, fair and equitable treatment, full protection and security, the non-discrimination standards of national treatment and MFN, the prohibition of unreasonable and discriminatory measures, umbrella clauses and transfer guarantees. These standards are covered in separate chapters providing an overview of textual variations, explaining the origin of the standards and analysing the main conceptual issues as developed by investment tribunals. Relevant cases with quotations that illustrate how tribunals have relied upon the standards are presented in depth. An extensive bibliography guides the reader to more specific aspects of each investment standard permitting the book's use as a commentary of the main investment protection standards.

This essential new volume provides background information, historical perspective, and expert commentary on the ASME B31.1 Code requirements for power piping design and construction. It provides the most complete coverage of the Code that is available today and is packed with additional information useful to those responsible for the design and mechanical integrity of power piping. The author, Dr. Becht, is a long-serving member of ASME piping code committees and is the author of the highly successful book, Process Piping: The Complete Guide to ASME B31.3, also published by ASME Press and now in its third edition. Dr. Becht explains the principal intentions of the Code, covering the content of each of the Code's chapters. Book inserts cover special topics such as spring design, design for vibration, welding processes and bonding processes. Appendices in the book include useful information for pressure design and flexibility analysis as well as guidelines for computer flexibility analysis and design of piping systems with expansion joints. From the new designer wanting to know how to size a pipe wall thickness or design a spring to the expert piping engineer wanting to understand some nuance or intent of the Code, everyone whose career involves process piping will find this to be a valuable reference.

Since the decision of the International Court of Justice in LaGrand (Germany v United States of America), the law of provisional measures has expanded dramatically both in terms of the volume of relevant decisions and the complexity of their reasoning. Provisional Measures before International Courts and Tribunals seeks to describe and evaluate this expansion, and to undertake a comparative analysis of provisional measures jurisprudence in a range of significant international courts and tribunals so as to situate interim relief in the wider procedure of those adjudicative bodies. The result is the first comprehensive examination of the law of provisional measures in over a decade, and the first to compare investor-state arbitration jurisprudence with more traditional inter-state courts and tribunals.

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.

More than a million couples can't be wrong! And with this updated edition of their award-winning book, Drs. Les and Leslie Parrott help you launch lifelong love like never before. Now you can discover how to leverage your personalities for a love that last a lifetime. Make your marriage everything it is meant to be. Save your marriage—before (and after) it starts.

Fusion offers the prospect of virtually unlimited energy. The United States and many nations around the world have made enormous progress toward achieving fusion energy. With ITER scheduled to go online within a decade and demonstrate controlled fusion ten years later, now is the right time for the United States to develop plans to benefit from its investment in burning plasma research and take steps to develop fusion electricity for the nation's future energy needs. At the request of the Department of Energy, the National Academies of Sciences, Engineering, and Medicine organized a committee to develop a strategic plan for U.S. fusion research. The final report's two main recommendations are: (1) The United States should remain an ITER partner as the most cost-effective way to gain experience with a burning plasma at the scale of a power plant. (2) The United States should start a national program of accompanying research and technology leading to the construction of a compact pilot plant that produces electricity from fusion at the lowest possible capital cost.

BUILD AN INVINCIBLE BRAND IN THIS UNCERTAIN WORLD The potential risks in modern-day business are greater, more dynamic, and less predictable than ever before. And yet, the greatest exposure does not lie within these risks. Rather, it lies in having a team that is not prepared to anticipate, foresee, or respond to a rising threat, and its impact on your reputation, revenue, and relationships in real time. No matter your level of security, due diligence, or control, the reality is that we live in uncertain times. Organizations are prone to a multitude of risks that can attack from every angle. When your team is Crisis Ready, your organization is prepared for anything and everything that the modern world can throw at it.

In Towards Consistency in International Investment Jurisprudence, Katharina Diel-Gligor addresses the problem of inconsistent arbitral decision-making, with a focus on ICSID arbitration. After analysing the causes, forms, and manifestations of inconsistencies, she proposes a preliminary ruling system as a means of reform.
