The cell cycle and cell division is a series of events that lead to the formation of new cells.

It is not an exaggeration to say that continuity of life depends on this cell cycle.

Wikipedia

Cells grow and divide through the cell cycle.

The phases of the cell cycle include Interphase and the Mitotic phase.

Interphase consists of the Gap 1 phase (G 1), Synthesis phase (S), and Gap 2 phase (G 2).

Dividing cells spend most of their time in interphase, in which
