You too can make your own Code Blocks by double-clicking in the Dynamo canvas in version 0.7.0 or later. Numbers, strings, and formulas. Code Blocks can hold numbers, strings, and formulas. You won ' t even need those old-school nodes anymore. Enter a number like you would in the number node. Use quotation marks for strings.

[Scratching the Surface of] Everything You Need ... - Dynamo

When using Dynamo for Revit if you experience Code Block Nodes that you can not edit the root cause may be a collision with another instance of the AvalonEdit Open Source component: ICSharpCode.AvalonEdit.dll, found in the Dynamo Core folder under Program Files and also under the Revit SDA folder. Revit Addins may pull in their own version of the dll as well, for example DisplayBindings.

Solved: Cannot edit a Code Block in Dynamo 1.2.1 ...

Code Block Functions Functions can be created in a code block and recalled elsewhere in a Dynamo definition. This creates another layer of control in a parametric file, and can be viewed as a text-based version of a custom node. In this case, the "parent" code block is readily accessible and can be located anywhere on the graph.

Functions | The Dynamo Primer

Code Block. Double-click anywhere on the canvas to create a Code Block. The Code Block is your bread and butter node for your Dynamo Scripts. You can input code to represent letters, numbers, a sequence, and much more. For example, you can use quotes to represent a string. You can create a repeating sequence by entering X..Y..Z where "X" is the first number of the sequence , "Y" is last number of the sequence, and "Z" is the difference between numbers in the sequence.
