DECISION MAKING IN PERIODONTOLOGY illustrates the thought processes in the field of periodontics that determine optimal therapy for an individual patient. The approach entails the use of a decision tree for each clinical problem or situation; this is accompanied by a brief explanation of the basis for each decision. The chapters present common clinical problems in a format that enables the reader to find solutions more easily than in traditional texts. In addition, several readily available references are included with each chapter. The text is organized into eleven sections from the most basic to the most complex for assistance with problem solving in dental practices. Sections include: History Taking, Indications for Collecting and Recording Data, Signs and Symptoms, Initial Therapy Evaluation, and Detecting and Recording Findings, Differential Diagnosis and Treatment Planning (among others) that focus on clinician's concerns. * Each chapter includes several readily available references, organized into sections from most basic to most complex. * Decision tree format is provided for each clinical problem or situation. * Signs and symptoms section presents unique diagnostic approach options shown in the algorithms. * Includes decision trees that address periodontal treatment for impacted third molars and five different types of implants.

High-quality dental patient management demands an appropriately skilled team. It is the general dental practitioner's responsibility to co-ordinate the team and to take overall responsibility as the team leader. Your team provides all the specialities necessary to achieve a stable, functional, aesthetic masticatory unit, which not only encompasses the management of periodontal disease, but integrates a treatment plan the patient can maintain.

High-quality dental patient management demands an appropriately skilled team. It is the general dental practitioner's responsibility to coordinate the team and to take overall responsibility as the team leader. This clinically oriented book covers all aspects of the evidence-based decision making process in multidisciplinary management of the natural dentition. The book opens by clarifying the principles of evidence-based decision making and explaining how these principles should be applied in daily practice. Individual chapters then focus specifically, and in detail, on endodontic, periodontal, and prosthetic considerations, identifying aspects that need to be integrated into decision making and treatment planning. Evidence-based decision making with regard to preservation of the natural tooth versus extraction and implant placement is then discussed, and a concluding chapter examines likely future trends in dentistry and how they may affect clinical decision making. The authors include leading endodontists, periodontists, and prosthodontists. Given the multidisciplinary and comprehensive nature of the book, it will be relevant and interesting to the entire dental community.

Critical Decisions in Periodontology, Fourth Edition, is designed to guide students and practitioners in applying their decision-making knowledge in a structured and logical manner. Ethical principles are essential in the practice of dentistry, and Ethical Decision Making in Dentistry takes the reader from ethics in dental education to creating ethical protocols and public policy. This concise volume covers ethics issues in the education of dentists, in licensure and licensing examinations, in solo and group private practice, and in esthetic dentistry. It also supplies a chapter presenting the patient's perspective on medical ethics, one on informed consent, and another on the process of developing the guidelines for ethical dental decision-making. The topics of billing, office management, and advertising are covered, and the book closes with a chapter entitled "Ethics in Transition", which charts transitions in a dentists' practice and career as well as transitions in how ethical principles themselves are viewed. Ethical Decision Making in Dentistry is a valuable text for teaching ethics in dental schools, but also serves as a refresher course for practicing dentists at any stage of their professional lives.

This unique reference illustrates the thought processes of dentists in several of the clinical specialities when their specific aspect of care is involved in complex dental cases. The text is divided into five sections to present decision making for treatment planning as viewed by specialists in the areas of periodontics, endodontics, orthodontics, prosthodontics, and oral surgery. Each chapter is presented in a format that enables the reader to find solutions more easily than in traditional texts. Explanatory text accompanied by illustrations and references appears on the left-hand page, and an algorithm or decision tree appears on the right-hand page. NEW to this edition: * Coverage of recent changes in dental treatment options that affect your decision-making process * New information on surgery and implants in the periodontic section * Revised and expanded material on endodontics, orthodontics, and prosthodontics * Many new photographs and algorithms throughout
