The choice of outside plant fiber optic (OSP) components begins with developing the route the cable plant will follow. Once the route is set, one knows where cables will be run, where splices are located and where the cables will be terminated.

Outside Plant Fiber Optics

Outside plant cabling, whether copper or fiber, is generally installed as aerial cable between poles, in an underground conduit system, or by direct burial.

Hardware associated with the outside plant must be either protected from the

Download Free Fiber Optics

elements (for example, distribution frames are generally protected by a street side cabinet) or constructed with materials suitable for exposure to the elements.
