Treating nuclear, biological, and chemical agent exposures presents a unique set of challenges. These scenarios usually involve multiple exposures, sometimes even mass exposures, from a single, often poorly-defined, event. Early symptoms are not distinct and can often be variable. Laboratory analyses may be required from environmental, often nonbiological, specimens. Scene evaluation and pre-hospital decontamination may turn out to be the most important intervention. Hospital resource utilization must be a consideration. Even the pathologist performing autopsies needs adequate preparation. It is with these considerations in mind that the Handbook of Nuclear, Biological, and Chemical Agent Exposures was created. Taking a concise yet comprehensive, clinical approach to the treatment of these exposures, the authors provide concise information on radiation substances, biological agents, chemical toxins, laboratory tests, and antidotes. The book includes essays on topics such as Field Identification and Decontamination of Toxins, Bioterrorism and the Skin, and Mass Exposures Involving the Pediatric Population. A quick review of the contents will tell you that this book contains the tools you need when facing the formidable tasks of diagnosing and treating nuclear, biological, and chemical agent exposures.

you need to survive a terrorist attack. It contains the best practices of all the United States' military services, adapted for the first time for civilian use. Experts agree that the threats posed by terrorists and enemy nations have never been graver. This handbook is the single most effective tool you can own to protect yourself and your family against the danger looming over our homeland. This manual will show you how to: - Protect yourself during a chemical or biological attack - Recognize the indicators of nuclear, chemical and biological attack - Develop a simple and effective family action plan - Guard against the radiological effects of a dirty bomb - Assist victims of nuclear, chemical, or biological agents - Assemble and store the everyday materials that could save your life

Impressive in its overall size and scope, this five-volume reference work provides researchers with the tools to push them into the forefront of the latest research. The Handbook covers all of the chemical aspects of nuclear science starting from the physical basics and including such diverse areas as the chemistry of transactinides and exotic atoms as well as radioactive waste management and radiopharmaceutical chemistry relevant to nuclear medicine. The nuclear methods of the investigation of chemical structure also receive ample space and attention. The international team of authors consists of 77 world-renowned experts - nuclear chemists, radiopharmaceutical chemists and physicists - from Austria, Belgium, Germany, Great Britain, Hungary, Holland, Japan, Russia, Sweden, Switzerland and the United States. The Handbook is an invaluable reference for nuclear scientists, biologists, chemists, physicists, physicians practicing nuclear medicine, graduate students and teachers - virtually all who are involved in the chemical and radiopharmaceutical aspects of nuclear science. The Handbook also provides for further reading through its rich selection of references.

This handbook implements AFD 32-40, Disaster Preparedness and AFMAN 32-4005, Personnel Protection and Attack Actions. AFH 32-4014, Volume 3, provides Civil Engineer Readiness Flight personnel with general information and technical data concerning fielded chemical and biological warfare defense equipment. The information contained in this guide was extracted from various Air Force Technical Orders and/or equipment manuals. The information contained herein does not supersede any published Technical Order (T.O.), Readiness Training Package (RTP), or equipment manual. Information on planning and analysis, hazards, and defense procedures can be found in Volumes 1, 2, and 4, respectively.
