Though many pioneering feminists were deeply influenced by American pragmatism, their contemporary followers have generally ignored that tradition because of its marginalization by a philosophical mainstream intent on neutral analyses devoid of subjectivity. In this revealing work, Charlene Haddock Seigfried effectively reunites two major social and

philosophical movements, arguing that pragmatism, because of its focus on the emancipatory potential of everyday experiences, offers feminism its most viable and powerful philosophical foundation. With careful attention to their interwoven histories and contemporary concerns, Pragmatism and Feminism effectively invigorates both traditions, opening them to new interpretations and appropriations and asserting their timely philosophical relevance. This foundational work in feminist theory simultaneously invites and guides future scholarship in an area of rapidly emerging significance.

This book applies system theory to analyze the operation and structure of the complex earth surface system, including the interactions between society and nature that cause environmental degradation and threats to human populations. The possible ways to harmonize the operation of a global society as a complex system using the United Nation sustainable development goals are investigated, as well as the major efforts currently implemented to achieve this objective and why many are unsuccessful. Readers will learn this material through case studies that assess the essential conditions required to occupy a planet sustainably, and examine the complex interactions between society and nature in the atmosphere, hydrosphere, biosphere, and outer layers of the lithosphere. The book is written for undergraduate students in geography, earth sciences, environmental sciences, and ecology, and will also appeal to environmental agency employees, nature protection representatives, teachers, and researchers.
