A major objective of this volume is to create and share knowledge about the socio-economic, political and cultural dimensions of climate change. The authors analyze the effects of climate change on the social and environmental determinants of the health and well-being of communities (i.e. poverty, clean air, safe drinking water, food supplies) and on extreme events such as floods and hurricanes. The book covers topics such as the social and political dimensions of the ebola response, inequalities in urban migrant communities, as well as water-related health effects of climate change. The contributors recommend political and social-cultural strategies for mitigate, adapt and prevent the impacts of climate change to human and environmental health. The book will be of interest to scholars and practitioners interested in new methods and tools to reduce risks and to increase health resilience to climate change.

The entangled threat of crime, corruption, and terrorism now deserves high-level policy attention because of its growth trajectory. Using lively case studies, this book analyzes the transformation of crime and terrorism and the business logic of terrorism. Louise I. Shelley concludes that corruption, crime, and terrorism will remain important security challenges in the twenty-first century as a result of economic and demographic inequalities in the world, the rise of ethnic and sectarian violence, climate change, the growth of technology, and the failure of nineteenth- and twentieth-century institutions to respond to these challenges when they emerged.

This is an introductory to intermediate level text on the science of image processing, which employs the Matlab programming language to illustrate some of the elementary, key concepts in modern image processing and pattern recognition. The approach taken is essentially practical and the book offers a framework within which the concepts can be understood by a series of well chosen examples, exercises and computer experiments, drawing on specific examples from within science, medicine and engineering. Clearly divided into eleven distinct chapters, the book begins with a fast-start introduction to image processing to enhance the accessibility of later topics. Subsequent chapters offer increasingly advanced discussion of topics involving more challenging concepts, with the final chapter looking at the application of automated image classification (with Matlab examples) . Matlab is frequently used in the book as a tool for demonstrations, conducting experiments and for solving problems, as it is both ideally suited to this role and is widely available. Prior experience of Matlab is not required and those without access to Matlab can still benefit from the independent presentation of topics and numerous examples. Features a companion website www.wiley.com/go/solomon/fundamentals containing a Matlab fast-start primer, further exercises, examples, instructor resources and accessibility to all files corresponding to the examples and exercises within the book itself. Includes numerous examples, graded exercises and computer experiments to support both students and instructors alike.

Some European lands have been progressively alleviated of human pressures, particularly traditional agriculture in remote areas. This book proposes that this land abandonment can be seen as an opportunity to restore natural ecosystems via rewilding. We define rewilding as the passive management of ecological successions having in mind the long-term goal of restoring natural ecosystem processes. The book aims at introducing the concept of rewilding to scientists, students and practitioners. The first part presents the theory of rewilding in the European context. The second part of the book directly addresses the link between rewilding, biodiversity, and habitats. The third and last part is dedicated to practical aspects of the implementation of rewilding as a land management option. We believe that this book will both set the basis for future research on rewilding and help practitioners think about how rewilding can take place in areas under their management.

L'objectif principal de ce livre est de discuter des luttes pour l'intégrité du territoire québécois et la résilience de ses communautés. Pour cela, l'auteur s'est fixé 4 objectifs : Replacer

Carl Abbott, who has taught urban studies and urban planning in five decades, brings together urban studies and literary studies to examine how fictional cities in work by authors as different as E. M. Forster, Isaac Asimov, Kim Stanley Robinson, and China Miéville might help us to envision an urban future that is viable and resilient. Imagining Urban Futures is a remarkable treatise on what is best and strongest in urban theory and practice today, as refracted and intensely imagined in science fiction. As the human population grows, we can envision an increasingly urban society. Shifting weather patterns, rising sea levels, reduced access to resources, and a host of other issues will radically impact urban environments, while technology holds out the dream of cities beyond Earth. Abbott delivers a compelling critical discussion of science fiction cities found in literary works, television programs, and films of many eras from Metropolis to Blade Runner and Soylent Green to The Hunger Games, among many others.

A magnificent fantasy rife with scientific splendor, magical intrigue, and wonderfully realized characters, told in a storytelling style in which Charles Dickens meets Neal Stephenson, Perdido Street Station offers an eerie, voluptuously crafted world that will plumb the depths of every reader's imagination. Beneath the towering bleached ribs of a dead, ancient beast lies New Crobuzon, a squalid city where humans, Re-mades, and arcane races live in perpetual fear of Parliament and its brutal militia. The air and rivers are thick with factory pollutants and the strange effluents of alchemy, and the ghettos contain a vast mix of workers, artists, spies, junkies, and whores. In New Crobuzon, the unsavory deal is stranger to none—not even to Isaac, a brilliant scientist with a penchant for Crisis Theory. Isaac has spent a lifetime quietly carrying out his unique research. But when a half-bird, half-human creature known as the Garuda comes to him from afar, Isaac is faced with challenges he has never before fathomed. Though the Garuda's request is scientifically daunting, Isaac is sparked by his own curiosity and an uncanny reverence for this curious stranger. While Isaac's experiments for the Garuda turn into an obsession, one of his lab specimens demands attention: a brilliantly colored caterpillar that feeds on nothing but a hallucinatory drug and grows larger—and more consuming—by the day. What finally emerges from the silken cocoon will permeate every fiber of New Crobuzon—and not even the Ambassador of Hell will challenge the malignant terror it invokes . . .
