Some phytochemicals produce activity in biological systems, including humans; hence, the term ' bioactive phytochemicals. ' Liu (2013) has defined phytochemicals as bioactive nonnutrient compounds in fruits, vegetables, grains, and other plant foods that have been linked to reductions in the risk of major noncommunicable chronic diseases. In this review, nonnutrient compounds derived from plants that have biological activity in humans are considered to be bioactive phytochemicals.

Background. Brassica plants contain a wide spectrum of bioactive components that are responsible for their health promoting potential such as vitamins, polyphenols and glucosinolates. This study attempted to relate the composition of bioactive phytochemicals and chosen biological activities (antioxidant, cytotoxic, anti genotoxic, and influence on enzymatic activities) for extracts from differently pigmented cabbage (white and red) and cauliflower (white and purple) varieties.
