Graph Theory Problems and Solutions

These solutions are the result of taking CS-520 (Advanced Graph Theory) course in the Jan-July semester of 2016 at Indian Institute of Technology Guwahati. This is not a complete set of solutions in that book. It may happen that solution of some problem may be wrong. I have not verified these problem from some expert.

Solutions by getting problems based graph theory solutions as one of the reading material.

Problems Based Graph Theory Solutions

Another problem of topological graph theory is the map-colouring problem. This problem is an outgrowth of the well-known four-colour map problem, which asks whether the countries on every map can be coloured by using just four colours in such a way that countries sharing an edge have different colours. Asked originally in the 1850s by Francis Guthrie, then a student at University College London, this problem

What are real-world problems that graph theory can solve

...

Many problems and theorems in graph theory have to do with various ways of coloring graphs. Typically, one is interested in coloring a graph so that no two adjacent vertices have the same color, or with other similar restrictions. One may also consider coloring edges (possibly so that no two coincident edges are the same color), or
