Reality is a network of granular events; the dynamic that connects them is probabilistic; between one event and another, space, time, matter, and energy melt into a cloud of probability. This strange new world is slowly emerging today from the study of the main open problem in fundamental physics: quantum gravity.

As far as I understand, reality is definitely not what we think it is. Even without “matrix” scenarios, the fact is that the model of the world you have in your head is not the only possible descriptor of reality, and not even the “best”, unless you define as “best”, precisely your own model of reality. For example:

According to some cognitive scientists, what we perceive with our brain and our senses does not reflect the true nature of reality. Thus, while evolution has shaped our perceptions to guide adaptive behavior, they argue, it has not enabled us to perceive reality as it actually is.

For example, Rovelli is certain that spacetime - like all of reality - is granular, and not only that, but it embodies the “relational” aspect of quantum mechanics, ie it is a manifestation of field interactions, not a backdrop for other granular particles to manifest in. As Rovelli puts it ‘all of reality is covariant quantum fields’.

Reality is the independent nature and existence of everything knowable, whether it is knowable by logical inference, empirical observation, or some other form of experience. Reality’s existence and nature are independent because reality does not depend on our mind’s apprehension of it to continue to exist or to maintain its character.
