ocean. Here are five ways in which sharks and rays help the world, from fighting climate change to digging through sand for their neighbors to feeding phytoplankton.

Five ways sharks and rays help the world | Stories | WWF

The final Devonian order, Heterodontiformes, still has surviving members. Modern sharks and rays arose during the Jurassic Period, about 200 million to 145.5 million years ago, probably from an older group, the hybodont sharks. Presumably marine cladoselachians gave rise to the hybodont Heterodontiformes

Fish - Chondrichthyes: sharks and rays | Britannica

A recently updated Red List analyses from the International Union for Conservation of Nature (IUCN) indicates that 316 species of sharks, rays, skates, and chimaeras, are now considered threatened with extinction, many of them as a direct consequence of overharvesting for their meat, fins, and oil. These species are members of the Chondrichthyes class which means that they have a [...]

WWF-Philippines | More than 300 Species of Sharks and Rays ...

Sharks are part of a family of fishes known as cartilage fishes. They have no bones in their bodies, only cartilage, like the soft flexible tissue in the end of your nose. Rays are also a member of this group. In fact, rays are actually nothing more than flattened out sharks.

Sharks and Rays - Coral Reef Life on Sea and Sky

Skates and rays are very closely related to

Read Free Sharks And Rays Of The World

sharks. Theyre flatter in shape, which makes them well suited for life on the sea-floor. Their mouth, nostrils and gills are located on the underside of their body. While their eyes are on top. Skates and rays spend a lot of time buried in the sand. Either hiding from predators or lying in wait for unsuspecting prey.
