Since its initial appearance in 1961, Theorie und Praxis des Goldschmieds has become a standard for training goldsmiths and professional workshop practice, and is here translated from the 1994 edition. It discusses materials, basic techniques and tools, and such specific techniques as joining and pl

"The book examines a series of practical goldsmithing projects, each of which has been successfully completed by student goldsmiths using its instructions ... The creation of rings, chains, bracelets, earrings, and clasps, the use of specialized tools, as well as hand positions, movements, and technical data are described in lucid text and demonstrated with an abundance of detailed color photos"--Cover.

The definitive reference for jewelry makers of all levels of ability--a complete, profusely illustrated guide to design, materials, and techniques, as well as a fascinating exploration of jewelry-making throughout history.

Hundreds of color photographs detail the procedures and display a breathtaking assortment of pieces by talented artists. Each innovative project introduces techniques that range from casting and stamping to hand engraving, electroplating, and more specialized methods. The chapter on gems alone--featuring the work of Bernd Munsteiner, considered the world's best gem cutter--makes this source book invaluable.

Here is a beautiful new look at art jewelry that has a new look. These are todays top art jewelers whose work is often shown in art galleries and museums. Chapters present contemporary designs in gold, silver, mixed metals, found objects, glass, enamel work, and imaginative jewelry pieces that go beyond tradition. Over 540 color photographs and lots of detailed information will inspire jewelry designers and collectors alike.

Early Modern Things supplies fresh and provocative insights into how objects – ordinary and extraordinary, secular and sacred, natural and man-made – came to define some of the key developments of the early modern world. Now in its second edition, this book taps a rich vein of recent scholarship to explore a variety of approaches to the material culture of the early modern world (c. 1500–1800). Divided into seven parts, the book explores the ambiguity of things, representing things, making things, encountering things, empires of things, consuming things, and the power of things. This edition includes a new preface and three new essays on 'encountering things' to enrich the volume. These look at cabinets of curiosities, American pearls, and the material culture of West Central Africa. Spanning across the early modern world from Ming dynasty China and Tokugawa Japan to Siberia and Georgian England, from the Kingdom of the Kongo and the Ottoman Empire to the Caribbean and the Spanish Americas, the authors provide a generous set of examples in how to study the circulation, use, consumption, and, most fundamentally, the nature of things themselves. Drawing on a broad range of disciplinary perspectives and lavishly illustrated, this updated edition of Early Modern Things is essential reading for all those interested in the early modern world and the history of material culture.

What is finance? What questions does it principally concern itself with answering? What are the underpinnings of the means by which it attempts to answer those questions? And what conclusions does it reach? Written with the thoughtful reader in mind, and in a manner not requiring any prior familiarity with finance or economics, this book addresses these important fundamental questions. While not written as a how-to guide to investing, in general or in specific asset classes or marketplaces, the thoughtful reader will come away with a widely applicable conceptual framework as to how to think about doing so in virtually any investment application. Its contents are those which underpin all such markets and, overtly or not, the actions of market participants across time. It is the foundation upon which our vast financial edifice is built. And, for these reasons, the book's two authors have found it to be a fascinating and worthwhile object of thought and attention for the past eighty combined years. The book is divided into two parts. The first, entitled "Foundations," spans the initial ten chapters and concerns itself with the theory that underpins virtually all financial markets, including: Default-Free and Risk-Free Assets; Mean-Variance Theory; the Capital Asset Pricing Model and its applications; Arbitrage Pricing Theory; the Finite State Approach to Modern Finance; and Valuation. The second part, entitled "Markets," explores these financial markets in detail by way of chapters individually dedicated to each, including: stock markets; bond markets; money markets; asset backed securities; futures and forward contracts; currency markets; options; swaps; and hedge and private equity funds. The book concludes with the exploration of select paradoxes in modern finance, with explanations proffered for their existence and perpetuation.

Thirteen papers on different subjects, focussing on writings and inscriptions in medieval art, explore the faculty of writing to create and determine spaces and to generate the sacred by the display of holy scripture. The subjects range from book illumination over wall painting, mosaics, sculpture, and church interiors to inscriptions on portals and façades.
