Describes the events that occurred during the tsunami in the Indian Ocean in 2004, from the disaster itself and the damage that was caused to the rescue efforts of the international community.

On December 26, 2004, a gigantic earthquake ripped apart the floor of the Indian Ocean off the coast of Sumatra. The force of the quake sent a tsunami in all directions toward unprotected shores and unwarned populations, many in remote areas or secluded vacation spots. Within 12 hours, more than 200,000 people had been killed, and many more left injured or homeless, their livelihoods destroyed. Cities and villages lay in ruins. Even the geography of the earth was changed. But as the affected countries, with help from around the world, struggled to recover, scientists warned that the next deadly tsunami could come at any time. The question remains whether the world will be any more prepared for the next one. Read how the Indian Ocean earthquake and tsunami changed the way nations are tracking natural-disaster warnings in an effort to prevent future disasters.

The disaster in the Indian Ocean started with a massive undersea earthquake off the coast of Indonesia. What followed was a surge of water called a tsunami that killed thousands of people in nearly a dozen countries. Water rose up miles inland and destroyed everything in its path. Children were ripped from their parents' arms, family members were lost to each other forever. This is their story. But more importantly, this is a story of hope, of how people woke up to destroyed cities and missing children and did not give up. They showed what they were made of by licking their wounds and then trying to find their lives again. This is also the story of how the world responded with the biggest humanitarian effort in history. Countries from all over the world sent money, food, water, soldiers, and doctors. This moving account is based on the author's extensive research, including his personal trip to Indonesia in January 2005, where he witnessed the devastation firsthand and spoke to dozens of survivors.

were registered as missing and 1.7 million people were displaced. As well as this horrendous toll on human life

Explores the 2004 Indian Ocean Tsunami and how that event has sculpted societies, the sciences, and politics.

The 2004 Indian Ocean tsunami was triggered by a 9.15 magnitude earthquake (MELTZNER et al. , 2006; CHLIEH et al. , 2007) that occurred at 0:58:53 GMT, 7:58:53 LT (USGS) (t). The epicenter was located at 3.3 N, 95.8 E (Fig. 1) with a focal depth of EQ approximately 30 km. The earthquake was responsible for a sudden fault slip estimated on average from 12–15 m (SYNOLAKIS et al. , 2005; LAY et al. , 2005) to 20 m (FU and SUN, 30 2006). The seismic moment estimate ($M_0 = 1.359 \times 10^{27}$ dyne-cm), based on the Figure 1 Locations of video recordings, recovered clocks, and reliable eyewitness observations. 1: Coastal plains flooded by the tsunami; 2: non-flooded coastal plains; 3: uplands. The video taken at Uteuen Badeue, on the eastern edge of the Banda Aceh Bay, was recorded by the chief of the Fishery Regional Office from the top of a cliff. The movie that was shot near the Baiturrahman mosque in downtown Banda Aceh has been shown worldwide on TV. The one at Peukan Bada has been recorded during a wedding party. The last two movies were analyzed in detail in order to calculate the tsunami velocity (FRITZ et al. , 2006). Vol.

"Whenever an earthquake or tsunami takes thousands of innocent lives, a shocked world talks of little else." - Anne M. Mulcahy
In the Christian world, December 25 is a time of great rejoicing and celebrating the birth of Jesus Christ. It is by far the most festive time of year, marked by parties, church services and giving gifts. It is also a popular vacation time, as families use the breaks given by offices and schools to travel, often to exotic destinations. That is why so many of those who witnessed the Great Tsunami of 2004 were not native to the areas struck but had traveled there to enjoy the sun during the dead of winter. Most of them slept soundly on Christmas night and woke up the following morning with plans to enjoy a fun day playing along white beaches or exploring dense jungles. For many, it was supposed to be the adventure of a lifetime, but for everyone in the region, it would instead become a fight for survival. Around 8:00 a.m. on December 26, a massive earthquake registering a 9.1-9.3 on the Richter Scale struck off of Sumatra, Indonesia, making it the 3rd strongest earthquake ever recorded by seismographs. On top of that, the earthquake shook for nearly 10 minutes and generated incredibly strong tsunami waves, some of which topped out at over 100 feet tall as they crashed inland in places like Thailand, India, and Indonesia. Given the great distances traveled, some of the tsunami waves didn't reach shore until 7 hours after the earthquake, but thanks to the element of surprise, people in the region had virtually no warning of what was coming. With more energy than that generated by every weapon and bomb used during World War II combined, the tsunami waves pulverized entire towns and swept away hundreds of thousands of people across Southeast Asia, in addition

to displacing more than a million people. Given how calamitous the events were, a massive outpouring of humanitarian support was sent to the affected areas, and over \$10 billion was poured into relief efforts. Not surprisingly, a better tsunami detection system was also designed to prevent against any similar occurrence, even though it's believed that the last similar event in that region took place over 500 years earlier. The 2004 Indian Ocean Earthquake and Tsunami: The Story of the Deadliest Natural Disaster of the 21st Century chronicles the incredibly powerful earthquake and the deadly tsunami waves it triggered in Southeast Asia. Along with pictures of important people, places, and events, you will learn about the 2004 earthquake and tsunami like never before, in no time at all.
